

BAUER PureAir

Greater safety. More confidence. More customers.

Obtain certification to the BAUER PureAir Standard! By doing so you make the case for pure breathing air and at the same time take a positive step to set yourself apart from competitors. Your diving customers will value this seal of quality awarded exclusively by BAUER for breathing air compressors and will place their full trust in you. This is something that can only be to your advantage!

Your benefits at a glance:

- Full confidence in the air quality delivered
- Quality feature compared to other centres
- Ability to show the PureAir certificate
- Minimisation of liability risk through greater safety for the sport of diving
- Divers can find your centre on the BAUER PureAir [website map](#)
- You can use the BAUER PureAir logo in your own advertising

This is how BAUER PureAir certification works

An authorised BAUER dealer visits you and checks the breathing air of your filling centre for its water, oil, carbon dioxide and carbon monoxide content. If these have limit values that comply with those set out in DIN EN12012 and if you use BAUER SECURUS to automatically monitor cartridge saturation, you will be awarded the BAUER PureAir certificate. Hang it up at your diving centre for everyone to see. It immediately tells your diving customers that you take the subject of safety seriously. Why not take part - it makes sense!

You can find out more about BAUER PureAir and the effects of impure breathing air at:
